

Hayes Introduces New “Universal” Quik Receiver Mounting Sleeve Designed to Fit *ALL* Hayes Brake Controller Models

Hayes Brake Controller Company is pleased to announce the availability of our new “Universal” Quik Receiver Mounting Sleeve, model number 81793. This Hayes exclusive design will accommodate the quick and easy mounting of **ALL** current Hayes brake controller models as well as our revolutionary new “G2” accelerometer controller, scheduled to debut this fall.

The Model 81793’s high-impact ABS material design incorporates a Very High Bonding (VHB) adhesive which facilitates quick and secure mounting of **all** Hayes brake controller models and eliminates the need for metal U-mounting brackets, screws*, tools or any screw holes in the dash of the tow vehicle.

The Hayes “Universal” model 81793 will replace Quik Receiver Model 81791 that was originally designed to suit only the Engage, Endeavor and Genesis brake controller models.

This exclusive Hayes accessory, combined with our complete line of dual-mated OEM/HBC wiring harnesses, now make brake controller installation even faster, easier and more time and labor saving – adding profits to your business!

Please visit www.hayesbc.com for a complete demonstration of this unique mounting option, now available only from “Hayes – Your Brand of Choice” in brake controllers.

(Model 81793 incorporates pre-drilled screw holes for optional screw mounting. Screw pack is included in the clamshell package.)

Note: Due to the unique dimensions of Hayes model 100400B air actuated controller, a U-bracket screw mounting is still required for proper installation of this model.
